

ARTTECH CINEMA

# BCVU S Slim Boothless Cinema Ventilation Unit

[www.arttechcinema.com](http://www.arttechcinema.com)

- The Boothless Cinema Ventilation Unit (BCVU) is designed for perfect ventilation of the projector inside the lift and ProBox, regardless of the cinema central ventilation system capacity.
- Its small size allows for installation over or near the lift and ProBox, in the false ceiling void.
- The special acoustic box of the BCVU eliminates the noise transferred to the auditorium.
- The built-in air filter extends the working life of the projector.
- Each BCVU is intended for a specific projector type to optimize its performance.
- A separate BCVU for each projector reduces the risk of malfunctions of the ventilation system.
- The BCVU means smaller investment costs and lower energy consumption.
- BCVU are produced with the following capacities 700m<sup>3</sup>/h, 1000m<sup>3</sup>/h and 1250m<sup>3</sup>/h, which are compatible with all the projectors on the market.
